Subject: OU1 Action Items Background Calculation Report
Attachments: BackgroundAlternative- Jan2014.pdf

Attached is the paper describing how background can be calculated from a mixed data set. The process is pretty straight forward, determine if the dataset is normally distributed or not, rank order the results and plot them out. I don't suggest we run statistics or anything until we see what the plots look like. We can then determine if there is interest in looking at this further.
